The files are of type 7z which is a compressed file. You will need either 7-zip or Winrar to decompress these files. First, decompress the 'Ogre' file. Put it in a nice and easy to find folder like 'C:\python-ogre'. Then decompress the 'Media' file. Put it into the same directory. Mine looks like this:

*Note: There is no Media folder because Media is put into demos when you extract it to the python-ogre directory like I told you to. Do not extract to the demos folder directly or you will end up with a demos folder inside the original demos folder.
