ROBOTICS@CS
First Biannual Robotics Contest

Integrating Learning through Robotics

When: April 30th at 3:00 p.m.
Where: LME 315

Join us at the inaugural computer science robotics competition! This semester, two teams of CS201 honors students designed, built, and programmed autonomous robots to play (our version of) soccer. Made using Lego Mindstorms Kits, the robots compete in an 8x4 arena trying to place, push, throw, guide, or otherwise propel "soccer" balls into their opponent's goal. These robots are completely self contained with an on-board computer, touch sensors, motors, and one light sensor each. The teams have sweated, cried, danced, laughed, and frolicked through the semester – now, let the games begin! You can find the contest rules and arena layout at http://www.cs.unr.edu/~sushil/201h
